

## CLAIMS

I claim:

1. A fog filled bubble blower comprising:

a housing attached to a battery box, exhaust fan, fog fluid reservoir, fog chamber, heating element assembly, electric motor, nozzle, and bubble wand, and having switched circuits to operate the electric motor and the heating element assembly, so that when fog fluid from the fog fluid reservoir reaches the heating element assembly, the fog fluid is vaporized in the fog chamber, and when the bubble wand is dipped into bubble solution, and the exhaust fan is activated, fog is sucked out of the fog chamber and forced through the nozzle and through the bubble wand, forming a bubble which is filled with fog.
